

PRESS RELEASE

Gut Hülsenberg – best conditions for consistently high performance

Currently 210 cows are placed at Gut Hülsenberg in the surrounding of Wahlstedt, which is distinguished by a constant high performance. Over the years the performance level has steadily increased and is currently at an average capacity of 11,873 kg milk with 3.91 % fat and 3.27 % protein.

This performance combined with a high service life, the cows of Gut Hülsenberg show repeatedly a lifetime productivity of 100,000 kg milk. This year Frauke (Father: Aron/ MF Jedstars) has been honored. In the 8th lactation she achieved a lifetime productivity of 114,083 kg milk. Separated cows have an average performance of 18,6 kg milk per day.

The constant high performance of the cows is based on the excellent conditions at Gut Hülsenberg. After the reorganization and new building of the stables, they offer the best comfort for cows, young cattle and cattle which are concerted to the needs of the animals. In addition, it ensures an individual and performance-linked feeding after the SCHAUMANN-concept as well as an experienced management high single and yearly performance.

additional information:

Gut Hülsenberg in Wahlstedt embraces 600 ha forage area, milk production with 210 cows and two biogas plants. In 2013 the reorganization and new building was finished. Overall there are 230 resting boxes and three deep-litter calving areas are available. With jalousie the side ventilation is controlled. The rubber surface on the slatted floor improves the hoof health and in thereby also the animal welfare. In the Double-12er Side-by-Side parlour the cows are milked twice per day. In the stable for the young cattle 134 modern and livestock-friendly places are offered. There the calves from the age of 5 months are growing under best conditions. The stable for the calves with 100 places is divided into three areas: single ben, deep-litter and resting boxes.
